

## ■ Uncompromising stance for product safety

If a product is to be used in full confidence over a period of many years, product safety is a topmost concern. Total safety cannot be achieved through design and manufacturing steps alone. A range of other initiatives are also required to ensure safe use after purchase. Methods to deal with problems arising in the market must be worked out, and a culture of safe use must be nurtured. Based on our own Accuphase Quality Management System, we give due consideration to safety in design, production, and sales, involving every department of our company.

In recognition of these activities, the Japanese Ministry of Economy, Trade and Industry bestowed the prestigious "METI Minister's Award" in the category of "Best Contributors to Product Safety (PS Award)" to Accuphase in 2011 and again in 2014. Having been honored in this way inspires us to further intensify our ongoing efforts towards ensuring product safety on the highest level.
